

DEVELOPMENT AND DEVELOPMENT OF A LEARNING MANAGEMENT SYSTEM(LMS) FOR ONLINE EDUCATION

This Section is done by NAZMUL HOSSEN ALIF

66283

INTRODUCTION

In the modern education system , technology has fundamentally changed how individuals study and interact. A huge number of educational institutions Such as schools, colleges, and universities rapidly rely on digital platforms to distribute course materials, administer tests, and stay in touch with students. They are shifting to the Learning Management System(LMS), a software solution then would structure to optimize and manage these online educational activities.

The core of this project addess developing and deploying an LMS tailored for digital education. Through this system, educators and students can easily access resources, hand in assignments, engage in discussions, and track academic success online. Eventually, the LMS provides to strengthen teacher-student communication and supply more adaptable, available learning experience.

The ultimate goal of this project is to deliver a secure and intuitive LMS capable of effectively hosting online learning activities. Furthermore, it is designed to upgrade student engagement, reduce the manual administrative workflows, and ensure that educational resources remain seamlessly accessible from any location at any hour.

PROJECT OBJECTIVES

The core objectives of this project are:

1. Design and setup a secure, user-centric LMS dedicated to online learning.
2. Ensure that students can effortlessly get lessons, open assignments, and complete exams.
3. Enable faculty authorised person to upload curriculum and efficiently monitor student performance.
4. Upgrade instructor-student interaction by applying discussion forums and automated notifications.
5. Reduce on manual administrative burdens and paper-based processes across the institution.
6. Implement digital modules for easily grading and attendance tracking.
7. Provide a strong, scalable system that offers a consistent user experience on any device.

PROJECT SCOPE STATEMENT:

The scope of work addres, designing, coding, testing, and utilizing a dedicated Learning Management System to support online education for students, teachers, and administrators.

Necessary features that need to built into the platform will include user login portals, course setup, assignment submissions, digital gradebooks, attendance logs, online quizzes, notice boards, and discussion forums. This setup allows students to view lessons and complete tasks digitally, while giving faculty the tools to manage curriculum, distribute resources, and grade performance.

Accessed directly through web browsers, the LMS will prioritize a clean, user-friendly interface backed by strong security measures to safeguard sensitive user and institutional data. However, out-of-scope items for this project include physical classroom coordination, traditional paper-and-pen exam systems, and any hardware installation. The project remains strictly dedicated to digital learning services and online management.

PROJECT DELIVERABLES

These following deliverables will be generate as outcome of this project:

1. Learning Management System (LMS) web application
2. Student dashboard
3. Teacher dashboard
4. Administrator control panel
5. Course management module
6. Assignment and quiz management system
7. Attendance tracking system
8. Database for storing user and course information
9. Testing and evaluation report
10. Final deployment of the LMS platform

STAKEHOLDERS

There are several stakeholders who will get benefit from the lms system:

Stakeholder	Role in the project
Students	They will use the LMS to access learning materials and submit assignments
Teachers	They will Upload course content, manage quizzes, and evaluate students

Administrators	They Manage users, courses, and overall system operations
Project Manager	Oversees project planning and execution
Developers	They will Design and develop the LMS system
Testing Team	They will fix if there is any errors
Educational Institution	Uses the LMS platform for online education services

ASSUMPTIONS AND CONSTRAINTS

ASSUMPTIONS:

1. User need internet access to use the LMS platform'
2. Teachers and students requires basic computer knowledge
3. Institution will provide necessary project resources and support

CONSTRAINTS:

1. Certain project budget and implement time
2. Security and privacy requirements for the institution'S data
3. Dependence on internet connectivity for online learning activities.
